

GREVILLEAS

- ❑ Valuable for their form and long blooming season, these Australian natives will be an exciting asset to your garden.
- ❑ Most bloom through the winter months when not much else is blooming. Hummingbirds love them!
- ❑ Most Grevilleas are hardy to the mid 20s. They prefer full sun to part sun and little summer watering once established. Require good drainage.
- ❑ Larger varieties are great for dry bank covers and large scale areas. Do not feed Grevilleas with fertilizers that have a high phosphorus content.

BOONGALA SPINEBILL	3' tall X 10' wide	Long toothbrush clusters of dark red flowers bloom heaviest in winter and throughout the year. Sprawling habit.
